Platinet's Quality Control Process

1. IQC-Incoming Quality Control

- 1.1. Appearance of the Housing – 100% Checking
- 1.2. Battery Capacity Detection – Sampling
Observation – Capacity Grading System
- 1.3. Check the Internal resistance of the Cell.
Internal Impedance Tester
- 1.4. Deal with Defective Products

2. Semi-finished Checking

- 2.1 Attach the Insulating Barrier to the Positive Pole
- 2.2 Accurately Weld the Cell Spot
- 2.3 Tape Nickel of the Foil
- 2.4 Weld the Cell and the Control Panel
- 2.5 Semi-Finished Checking – 100% Checking –
Testing System

2.5.1 No-load Voltage

2.5.2 Loading Voltage

- 2.5.3 Charging Current
- 2.5.4 Circuit Protection Current
- 2.5.5 Overload Protection Current
- 2.5.6 Deal with defective products

3. Aging testing

- 3.1 Fully Charge Battery
- 3.2 Cycle 1 - Full Discharge and Recharge
- 3.3 The Extent of Charging is Fully Dependent
on the Environment

4. Power Bank Testing System

- 4.1 Load Voltage and Charge Battery
- 4.3 Verify Circuit Protection
- 4.4 Verify Overload Protection

5. Final Quality Assurance-Electronic Loader

Platinet's Li-ion Battery Construction

PLATINET guarantee stable efficiency up to 300 full charging cycles for power banks with Li-ion battery. After 300 charging cycles efficiency will gradually decline.

Platinet's Polymer Battery Construction

PLATINET guarantee stable efficiency up to 500 full charging cycles for power banks with polymer battery. After 500 charging cycles efficiency will gradually decline.

Formula for Number of Charging Cycles

Here are the step-by-step instructions to calculate how many times you can recharge a device with our power bank.

Devices used in this example:

- Platinet Power Bank model PMPB520 with capacity of 5200 mAh
- iPhone 4s with battery capacity of 1340 mAh

Step 1.

Calculate power of Power Bank

$$5200 \text{ mAh} \times 3.7\text{V} = 19\,240 \text{ MWh}$$

power bank capacity $\times$ constant inside voltage of any rechargeable battery, including power banks = power of PMPB520

Step 2.

Calculate real Power Bank's capacity

$$19\,240 \text{ MWh} / 5\text{V} = 3\,848 \text{ mAh}$$

total power of PMPB520 Power bank = input voltage of mobile device

Step 3.

All electronic devices lose their efficiency

$$3\,848 \text{ mAh} \times 90\% = 3\,463,2 \text{ mAh}$$

real power bank capacity $\times$ work efficiency = final power bank capacity

All electronic devices lose their efficiency while transferring power. Platinet's Power banks shows efficiency at 90%, so the power loss is only 10%

Step 4.

Calculate the number of charging cycles for your specific device

$$3\,463,2 \text{ mAh} / 1340 \text{ mAh} = 2,6$$

final power bank capacity / iPhone 4s battery capacity

Using Platinet Power Bank PMPB520 you will charge your iPhone 4s two and a half times

EXTERNAL BATTERY FOR DIGITAL PRODUCTS

POWER BANK

Power Bank Portable rechargeable back up battery for charging electronic appliances + microUSB. Mobile Phone, Tablet, Smartphone or any 5V digital devices.

Power Bank Przenośny akumulator do ładowania urządzeń elektronicznych+microUSB. Telefony komórkowe, smartfony, tablety i inne urządzenia elektroniczne zasilane napięciem 5V.

USE

High Test Scores

Our power banks received praise in independent tests made by journalists from the best technology magazines and online services for their reliability and use of high-quality materials. They are recommended for users who want the best power banks on the market.

Available Capacity

Number of charging cycles for smartphone depends on battery capacity and its operating life. Charging cycle refers to starting from a level of 1% or more of the smartphone's total battery capacity. Charging an empty smartphone battery (from 0% battery level) will consume more of the power banks power.

OMP10

Power Bank Portable rechargeable back up battery for charging electronic appliances + microUSB. Mobile phones or any 5V digital devices.

PARAMETERS: • Capacity: 10000mAh
• Input: DC5V / 1A • Output: DC5V / 1A • Charging time: 8h • Dimensions: 127x74x22mm • Weight: 300g

* 4 inch smartphone

CAPACITY	FULL CHARGING CYCLES*
2200mAh	
4400mAh	
6000mAh	
8000mAh	
10 000mAh	

Number of charging cycles for smartphone depends on battery capacity and its operating life. Charging cycle refers to starting from a level of 1% or more of the smartphone's total battery capacity. Charging an empty smartphone battery (from 0% battery level) will consume more of the power banks power.

MULTI-USB CHARGERS

Designed to Charge All 5V Devices
Maximum Current Output Per One USB: 2,40A
Short Circuit Protection, OVP, OCP, Fireproof Material
Input: 100~240V AC 50/60Hz
Power: 24,5 Watt

Intelligent Charging

Identifies your device and suits the most appropriate charging voltage.

CHARGER WITH 4 USB SOCKETS

- Max. current output per one USB socket: 2.4 A
- Total maximum current output: 4.9 A
- Dimensions: 95x75x28.5cm
- Weight: 120g

CHARGER WITH 5 USB SOCKETS

- Max. current output per one USB socket: 2.4 A
- Total maximum current output: 6.8 A
- Dimensions: 110.5x89x32cm
- Weight: 176g

CHARGER WITH 8 USB SOCKETS

- Max. current output per one USB socket: 2.4 A
- Total maximum current output: 10 A
- Dimensions: 180x60x34cm
- Weight: 270g

UNIVERSAL USB CAR CHARGER

+ microUSB Cable 1m

ŁADOWARKA Z 2 GNIAZDAMI USB

- Zaprojektowana do ładowania urządzeń mobilnych
- Maksymalne natężenie na każdym gniazdku USB – 2,4A
- Maksymalne natężenie na wszystkich gniazdach USB – 3,4A
- Wysokiej jakości niepalna obudowa z tworzywa sztucznego
- Wejście: 12-24VDC
- Wymiary: 55x28.5x29mm
- Waga: 49.6g
- Short Circuit Protection, OVP, OCP

CHARGER WITH 2 USB SOCKETS

- Designed to charge mobile devices
- Max. current output per one USB socket – 2,4A
- Total maximum current output – 3,4A
- Fireproof material
- Input: 12-24VDC
- Dimensions: 55x28.5x29mm
- Weight: 49.6g
- Short Circuit Protection OVP, OCP
